#### **DETAILED ACTION**

## **Priority**

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3,5-9 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Newton.

Newton shows an ejector cycle having a compressor VC', a high pressure heat exchanger C', a low pressure heat exchanger E', an ejector M', a gas-liquid separator S', and a variable throttle 104 which is mechanically linked to control the super heat of the refrigerant which has left the evaporator (through bulb 107). The refrigerant leaving the throttle is described as two-phase in line 50 of column 2. The throttle is integrated with the ejector.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 4 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Newton in view of either Gregory of Okazaki et al.

Newton discloses applicants' basic inventive concept, an ejector cycle device with a throttle controlling the high pressure refrigerant admitted into the ejector in accordance with the refrigerant superheat, substantially as claimed with the exception of using electric controls for the control valve. Gregory and Okazaki et al each show electric controls to be old in the cooling system control art. It would have been obvious to one of ordinary skill in the art at the time of applicants' invention from the teaching of either Okazaki et al or Gregory to modify the ejector cycle device of Newton by using electric controls to provide for easier changing of control parameters.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicants' prior patents (6,729,158, 6,729,149 and 6,477,857) Art Unit: 3744

show ejector system control devices, but are are patentably distinct from the current claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C Doerrler whose telephone number is (703) 308-0696. The examiner can normally be reached on Monday-Friday 6:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Denise Esquivel can be reached on (703) 308-2597. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
